

ASTRA BITCOIN

ABTC · A CRYPTOCURRENCY ON ETHEREUM

Whitepaper version 5.0 · 24 August 2026

3-102-960698 SRL · Republic of Costa Rica

www.astrabitcoin.com

Read this first. ABTC is a cryptocurrency. It pays no dividend, interest or profit share, gives no ownership of anything, and carries no claim over the assets or revenue of any person. No listing, price, return or backing of any kind is promised. It may be worth nothing and no market for it may ever exist. You may lose the entire amount you commit. This document is not investment, financial, legal or tax advice, and is not an offer or solicitation in any jurisdiction where that would be unlawful.

1 THE WHOLE THING IN ONE PAGE

SUPPLY
2,250,000

TOKEN CONTRACT
RENOUNCED

NETWORK
ETHEREUM

SALE PRICE
\$3.00

ABTC is a token on Ethereum, and that is the entire product. There are 2,250,000 of them. No more can ever be created, because the token contract has been renounced to the zero address and no mint function remains available to anyone, including Astra.

Holding ABTC gets you one thing: a balance recorded against an address you control, which you can transfer to another address. It is not a receipt, voucher, credit or claim. It does not entitle you to money, goods, electricity, services, votes, information or attention from Astra or from anyone else. Nobody is obliged to buy it back from you.

Astra does not classify ABTC under the law of any country. This document describes what the token does and does not do; you and your advisers reach your own conclusions under your own law. Its price, if any, is whatever third parties in the market are willing to pay, and Astra makes no statement about what that price is or may become.

The issuer and its founders carry on other commercial activities. **None of them back ABTC, none are financed by the sale of ABTC, and none create any obligation, right or expectation for holders of ABTC.** Section 7 sets this out. They are not a reason to acquire the token, and this document deliberately does not present them as one.

Why this document is so blunt. Earlier versions of Astra's material made claims that have since been withdrawn in full — a listing price, a profit share, a buy back, and later an electricity redemption. Section 10 lists every one of them and what replaced it. Nothing has been quietly deleted.

2 WHAT ABTC IS

ABTC is an ERC-20 token on Ethereum Mainnet. Holding it means an entry in the token contract's ledger attributing a balance to an address you control. Transferring it means changing that entry. There is no further function and no further meaning.

In this respect ABTC is comparable to Bitcoin and to other cryptocurrencies that carry no issuer obligation: the asset exists, it can be transferred, and it is worth whatever someone will pay for it at a given moment, which may be nothing.

2.1 What ABTC is not

NOT THIS	MEANING
Not equity or a share	No ownership of Astra or any other entity, in whole or in part.
Not a dividend right	No dividend, coupon, interest, yield or distribution, ever.
Not a profit share	No entitlement to any portion of revenue or profit from any activity.
Not a governance right	No vote, no consent right, no influence over any decision.
Not a debt	No loan, note or bond. Nobody owes the holder anything.
Not a claim on assets	No lien, charge or security interest over land, plant or revenue.
Not redeemable	No person is obliged to buy it back, redeem it or exchange it for anything.
Not a deposit	No deposit protection, insurance or compensation scheme applies.

3 TOKEN AND SUPPLY

ITEM	VALUE
Name	Astra Bitcoin
Symbol	ABTC
Network	Ethereum Mainnet, chain ID 1
Standard	ERC-20, 18 decimals
Token contract	0x8C45bC48a451F48cca403ff2DDba2dA0EA68c404
Total supply	2,250,000 ABTC, fixed
Token contract owner	0x00 (renounced)

Because ownership of the token contract has been renounced to the zero address, there is no minting function available to anyone, no pause function, no blacklist, and no ability to alter balances or rules. This is verifiable on chain and does not rest on trust in Astra.

What renouncement does and does not mean. It means the token contract cannot be changed and no further tokens can be created. It does not mean the token has value, that a market will exist, or that any promise has been made. It removes one specific risk and no other.

4 THE SALE CONTRACT

ITEM	VALUE
Sale contract	0x7F4875c4a43daF0c31E411c6317C2ca265DDf8A0
Verified source	Published on Etherscan, Solidity 0.8.20
Accepted assets	ETH, USDT, USDC
Price per ABTC	3.00 USD
Minimum, ETH	0.001 ETH
Minimum, stablecoin	1.00
Delivery	Same transaction, to the sending address
Sale contract owner	0x25Ae070f39072aAB0a4c569099Cf020Ee617ba43 – NOT renounced

ETH is converted to USD using a Chainlink price feed at the time of the transaction, with a maximum accepted feed age of one hour.

The sale contract is not renounced. Unlike the token contract, the sale contract retains an owner with administrative powers. The owner can pause and unpause the sale, withdraw proceeds and unsold tokens, change which assets are accepted, and — materially — call `toggleOracleMode` and `updateManualEthRate` to replace the Chainlink feed with a manually set exchange rate. A buyer sending ETH is therefore trusting the owner not to set an unfavourable manual rate. Anyone relying on the phrase "renounced contract" should understand that it applies to the token, not to the sale.

The 3.00 USD figure is the price at which the contract currently sells tokens. It is a parameter of a sale, not a valuation, not an appraisal, and not a statement that ABTC is worth that amount or will be.

Never buy from an exchange account. The contract issues ABTC to whichever address calls it. A withdrawal from an exchange is sent from the exchange's own address, so the tokens would be credited there and not to you. Transactions cannot be reversed and tokens lost this way cannot be recovered. Use a self-custody wallet.

5 WHAT ASTRA DOES NOT PROMISE

Astra makes none of the following, and any document, post, video or message that appears to make them on Astra's behalf is unauthorised and should be disregarded:

- no listing price, target price, forecast, projection or expected value;
- no undertaking that ABTC will be listed on any exchange or trading venue, at any time;
- no buy back programme, and no commitment to purchase ABTC from anyone;
- no burn programme and no supply reduction mechanism of any kind;
- no market making, liquidity provision or price support;
- no revenue share, profit share, dividend or distribution;
- no guaranteed date for any event of any kind.

Nothing supports the price. There is no mechanism, reserve, treasury policy or obligation that places any floor under the price of ABTC. If demand disappears, the price goes to zero and nothing intervenes.

6 CHECK ALL OF THIS YOURSELF

Every factual claim in sections 3 and 4 is on a public blockchain and can be confirmed without asking Astra and without trusting this document. It takes a few minutes.

TO CONFIRM	HOW
Total supply is 2,250,000	Open the token contract on Etherscan, <i>Read Contract</i> , call <code>totalSupply</code> . It returns 2250000 followed by 18 zeros.
The token contract is renounced	Same page, call <code>owner</code> . It returns the zero address. No address can mint or alter it.
No mint function exists	<i>Contract</i> → <i>Code</i> . The verified source has no callable mint.
The sale contract is not renounced	Open the sale contract, <i>Read Contract</i> , call <code>owner</code> . It returns a live address, not the zero address.
The price the contract will actually give	Sale contract, <i>Read Contract</i> , call <code>quoteETH</code> or <code>quoteStable</code> with the amount you intend to send. That is the exact quantity of ABTC it will issue.
The powers the sale owner holds	Read the verified source. <code>pause</code> , <code>withdrawETH</code> , <code>toggleOracleMode</code> and <code>updateManualEthRate</code> are all present.

If this document and the blockchain ever disagree, the blockchain is correct. Astra asks nobody to take its word for anything that can be read directly from a contract.

7 THE ISSUER

ABTC is issued by 3-102-960698 SRL, a Sociedad de Responsabilidad Limitada registered with the National Registry of the Republic of Costa Rica, corporate ID 3-102-960698, registered 16 April 2026, with its registered office at Los Yoses, San Pedro, Montes de Oca, San Jose. The manager and legal representative is Dr. Antoun Toubia.

Registration of a company in Costa Rica is not a licence, authorisation or approval to offer a digital asset, and no such authorisation is held or claimed in Costa Rica or anywhere else.

Other activities of the issuer are unrelated to ABTC. The issuer and its founders carry on other commercial activities, which have included and may include energy and infrastructure projects. None of them back ABTC, none are financed by the sale of ABTC, and none confer on holders of ABTC any right, claim, obligation or expectation whatsoever. No revenue, profit or asset of any such activity is payable or attributable to holders of ABTC by any route. Their success would give holders of ABTC nothing, and their failure would take nothing from holders of ABTC, because holders of ABTC hold no claim on them.

This document does not describe those activities in detail, and does so deliberately. Earlier versions presented an energy project alongside the token in a way that invited readers to treat the project as backing for ABTC. It never was. Describing a real business next to a token that has no claim on it creates a false impression however carefully it is qualified, so the description has been removed rather than merely disclaimed.

8 RISKS

The risk disclosure at www.astrabitcoin.com/risk/ is part of this document and must be read in full. In outline:

- **Total loss.** ABTC may become worth nothing. There is no floor, insurance, protection scheme or recourse.
- **No market.** No exchange listing is promised. Without a willing buyer you cannot realise any value at all.
- **Volatility.** Digital asset prices move sharply in both directions without warning.
- **Contract risk.** The sale contract is not renounced and its owner holds the powers described in section 4, including a manual price override.
- **Irreversibility.** Transactions cannot be reversed. Assets sent from an exchange account or to a wrong address are permanently lost.
- **Regulatory change.** Law may restrict holding, transfer or trading of digital assets in your jurisdiction.
- **Cross border enforcement.** The issuer is registered in Costa Rica; pursuing any claim across borders may be slow, costly or impractical.

9 ELIGIBILITY AND RESTRICTIONS

ABTC is not offered, and must not be acquired by, any of the following:

- United States persons, and persons located or resident in the United States or its territories;
- persons located or resident in, or nationals of, comprehensively sanctioned jurisdictions, including Cuba, Iran, North Korea, Syria, and the Crimea, Donetsk and Luhansk regions;

- persons on any applicable sanctions or restricted party list;
- persons in any jurisdiction where acquiring or holding ABTC would require a licence, registration, prospectus or authorisation that Astra does not hold, or would otherwise be unlawful.

You are solely responsible for determining whether your acquisition, holding or disposal of ABTC is lawful where you are. Registration of the company in Costa Rica does not authorise the offer of ABTC in any other country, and no such authorisation is claimed.

10 CHANGES FROM EARLIER VERSIONS

Earlier published material about ABTC contained statements that are withdrawn. They are listed here so that holders of older documents can see precisely what changed and why, rather than finding the claims quietly absent.

WITHDRAWN STATEMENT	POSITION AS OF THIS VERSION
"Planned listing price 10.00 USD"	Withdrawn. No listing price is stated and no listing is promised.
"50% of net operating profit"	Withdrawn. No profit share, dividend or distribution of any kind exists.
"Buy back and burn" funded by energy profit	Withdrawn. There is no buy back and no burn programme.
Supply "shrinking toward 1,000,000"	Withdrawn. Supply is fixed at 2,250,000 and does not reduce.
"21x rarer than Bitcoin"	Withdrawn. Scarcity framing is removed; it implied a valuation comparison that was never justified.
"The presale funds the build"	Withdrawn and corrected. Token sales do not fund the project, which is founder funded.
"Governance and utility token"	Withdrawn. ABTC carries no governance right and no utility function.
"ABTC is not a security"	Withdrawn as a self characterisation. Astra does not classify its own token; it describes what the token does and does not do, and buyers and their advisers draw their own conclusions under their own law.
Electricity credit and bill redemption	Withdrawn. An intermediate version described ABTC as redeemable against electricity bills. That created an issuer obligation and is removed. ABTC is redeemable for nothing.

Version 5.0 changes no position. It restates version 4.0 of 23 August 2026 in clearer language and adds section 6, on independent verification. Every operative statement — the disclosures, the list in section 5, the eligibility restrictions and the table above — is carried over word for word. Where this version and version 4.0 differ in wording, they do not differ in meaning.

11 CONTACT

3-102-960698 SRL, Los Yoses, San Pedro, Montes de Oca, San Jose, Republic of Costa Rica.
info@astrabitcoin.com · www.astrabitcoin.com

ABTC is a cryptocurrency. It carries no equity, dividend, profit share, governance right or claim on any asset or revenue. No listing, price, return or backing is promised. You may lose the entire amount you commit. This document is not investment, financial, legal or tax advice, and is not an offer or solicitation where such would be unlawful. It supersedes all earlier versions.
